Architecture

Hands on Workflow

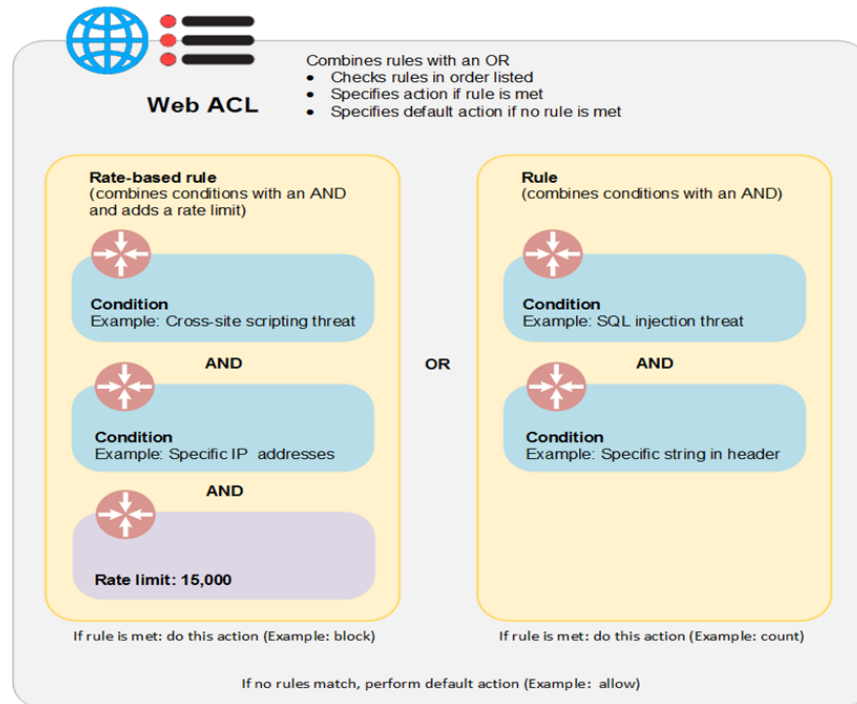

How AWS WAF Works

You use AWS WAF to control how API Gateway, Amazon CloudFront or an Application Load Balancer responds to web requests. You start by creating conditions, rules, and web access control lists (web ACLs). You define your conditions, combine your conditions into rules, and combine the rules into a web ACL.

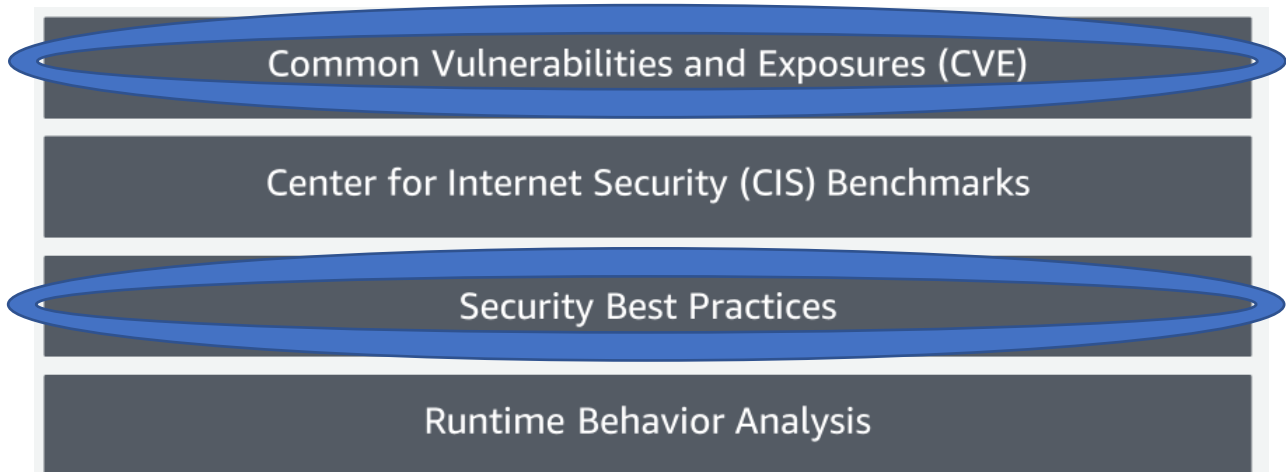

Protecting Workloads on AWS from the Instance to the Edge

Companion Guide

Amazon Inspector Rules Packages

4 kinds of rules packages and Severity Levels for Rules: High, Medium, Low, Informational
